

## **Medication Reconciliation Main Points for the ED**

- The patient's home medication list is entered into RxPad (using the same procedure as throughout Legacy).
- Use the entry "NONE" if the patient does not take medications at home.
- Use the entry "MEDICATIONS REVIEWED NO MED CHANGES FROM LAST ENCOUNTER" for repeat customers who already have an accurate home medication list in RxPad.
- Use the entry "UNLISTED" to add a medication you can't find in RxPad.
- You do NOT need to print out Report 1 (RxPad Home Medications List) for the majority of ED patients.
- If a patient has a prolonged stay in the ED and requires home medications and a MAR, then Report 1 should be used to order home meds from the pharmacy. (Send Report 1 to the pharmacy and notify them that this is an ED patient.)
- Physicians must either enter prescriptions into RxPad or use RxPad to document what they have prescribed in T-System.
- Report 11 must be faxed to the primary care provider (or next provider of service) unless he/she is a Legacy physician who has access to E-Chart.
- **Report 11** (*Discharge Medication Handout*) is given to the patient/family upon discharge.
- Report 12 (Recently Discontinued Medication Handout) is given to the patient/family if there are home medications that should be discontinued.
